

Igo T 130

The new standard

Come and see the video

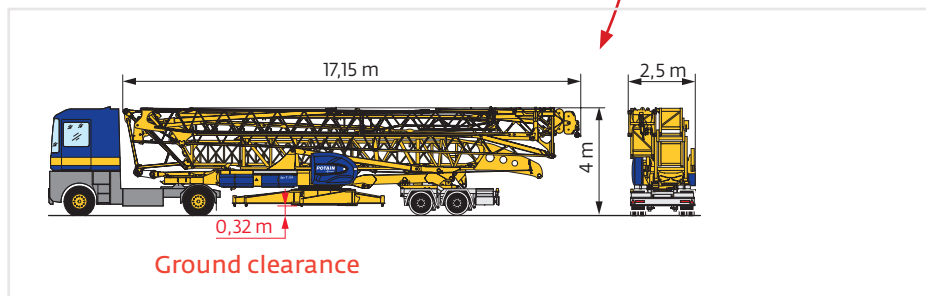

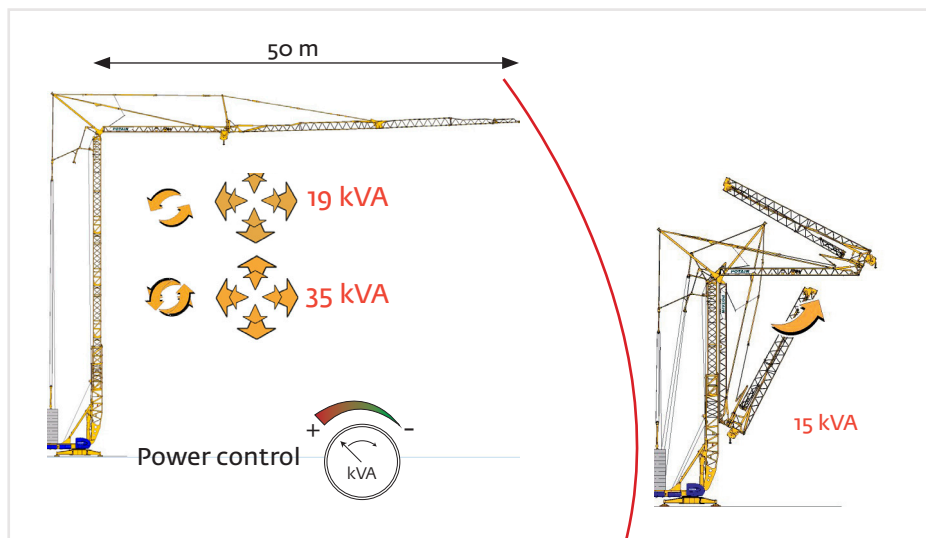

Igo T 130 sets the new standard

Incomparable loadchart

Jib Radius	50 m	47 m	42 m	33,5 m
Load at jib nose	1400 kg	1700 kg	2250 kg	3900 kg

The highest performance

- 50 m maximum jib radius
- 8000 kg maximum load
- 1400 kg load at jib nose
- 19,3 m to 37,3 m hook height

- **Fast and easy erection**

Top folding jib requires less space to erect

Reduce erection time of just half a day thanks to 6m mast and unique patented connection

- **Transport**

Quick and easy transport on just three trucks

50 m of complete jib, no dismantling required

- **Adaptability**

Jib tip can be folded/unfolded in less than 10 minutes

Erection at 15 kVA, use at 19 kVA and enjoy best results at 35 kVA thanks to our exclusive system «Power Control»

- **Comfort**

Ultra view cab : modern design, functional layout and optimal visibility

SmartCom system helps maintenance and fault clearance

*Optimizing productivity even at the most challenging jobsite,
the Igo T 130 sets the new standard !*

A large yellow tower crane is the central focus of the image, extending from the bottom left towards the top right. It has a lattice boom and a counterweight. The crane is positioned on a construction site with a dirt ground and some trees in the background. A stack of concrete blocks is visible in the lower left corner. The sky is clear and blue.
